

Senyawa - senyawa bioaktif dari spons

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=130049&lokasi=lokal>

Abstrak

marine environment is a rich source of both chemical compounds and biological diversities. In recent years, many bioactive compounds have been isolated from various marine organism, like sponges, coelenterates, microorganisms, algae,echinoderms,tunicates,bryozoans and molluscs. This paper wil be explained several bioactive compounds that have been isolated from marine sponges.
