

Pemanfaatan molase dalam produksi biosurfaktan melibatkan bacillus subtilis

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=130110&lokasi=lokal>

Abstrak

Biosurfactant are microbially produced compounds that can reduce surface tension and interfacial tension of the aqueous system. Biosurfactant can be applied in various industrial and environmental uses as emulsifier, detergency and oil recovery. Biosurfactant can be produced from various substrates of cassava flour wastewater, sugar and crude oil spills etcetera...
