Abstrak

Penelitian ini berfokus pada Penilaian Mantan Peserta Program Criminon dan Therapeutic Community (TC) tentang Efektifitas Pembinaan Rehabilitasi Penyalahgunaan Ulang Narkotika dengan membandingkan antara program Criminon dan Therapeutic Community (TC). Penelitian ini adalah penelitian kuantitatif dengan desain deskripsi analisis. Penelitian ini bertujuan untuk menganalisis penilaian mantan peserta tentang efektifitas pembinaan dari program Criminon dan Therapeutic Community (TC). Lebih lanjut penilaian mantan peserta tentang efektifitas yang dianalisis termasuk perbandingan dan frekuensinya terhadap pelaksanaan pembinaan Criminon dan Therapeutic Community (TC) dengan mengumpulkan data responden dari mantan klien masyarakatan melalui pengambilan sampel secara aksidental.

Hasil penelitian yang dilakukan, dapat diketahui bahwa tingkat penilaian mantan peserta tentang efektifitas pembinaan rehabilitasi penyalahgunaan ulang narkotika, berdasarkan asumsi penilaian mantan peserta Criminon dan Therapeutic Community (TC) bahwa efektifitas tertinggi pada program Therapeutic Community (TC). Metode Criminon memiliki nilai rata-rata 3.207, sedangkan metode Therapeutic Community (TC) memiliki rata-rata nilai 3.376. Artinya bahwa perbandingan antara program Criminon dengan program Therapeutic Community (TC) tidak ada perbedaan yang signifikan dalam hal efektifitas pembinaan karena derajat signifikansi (0,109) lebih besar dari nilai alpha (0,025) dengan tingkat kepercayaan 95%. Dari analisis perbandingan dan frekuensi diperoleh rata-rata persentase penilaian mantan peserta tentang efektifitas pembinaan adalah sekitar 95% responden menyatakan sangat baik (sangat efektif) dan sekitar 5% menyatakan tidak baik.

<hr>This research focus on Assessment Ex Participants of Criminon and Therapeutic Community (TC) for Assessment about the effectiveness of rehabilitation of re-use of narcotics by comparing between programs Criminon and Therapeutic Community (TC). This research is quantitative research design with descriptive analysis. Focus of this research is the analysis of effectiveness Assessment ex participants of treatment Criminon and Therapeutic Community (TC). Further, the effectiveness assessment were analyzed included comparison and frequency to treatment Criminon and Therapeutic Community (TC) which is by collecting of via questionnaire with accidental sampling.

The research results are disclosed that the level of effectiveness assessment ex participants of treatment rehabilitation prevention of narcotics, based on assumption assessment ex participants of Criminon and Therapeutic Community (TC) that effectiveness cycle of Therapeutic Community (TC). Metode Criminon has mean score 3,207 metode Therapeutic Community (TC) has mean score 3,376. Meaning that comparison between programe Criminon with programe Therapeutic Community (TC) not difference that signification in many things effectiveness of treatment because degree of signification (0,109) more bigger than alpha (0,025) with level of confidence 95%. From comparative analysis and frequency get an average

percentage of assessment ex participants about the effectiveness are around 95% respondents said very excellent and about 5% said is not good enough.
