

Pengelolaan sampah berbasis partisipasi masyarakat (Studi kasus sampah pemukiman di Kec. Pasar Minggu , Jakarta Selatan)

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=132082&lokasi=lokal>

Abstrak

Waste management is serious problem in big cities. The increase of population can lead to increase the amount and variety of waste. If this condition can't be handled seriously it will destroy environment and cause disaster in the long time , like flood and air pollution. Waste management can't be handled fully to society or government only , it is all parties responsibility that are government, particular and the whole of society. So, this research had tried to design waste management based on society participation. In order to deliver a good contribution , this research had took a case study on household waste management in Kecamatan Pasar Minggu South Jakarta. This research used descriptive as a type of research , that is describing household society participation in waste management . Furthermore, the result was used to design to design waste management from based on society participation. To achieve a good result , many parties were used as respondent in this research.
