**ABSTRAK
**

Perilaku kekerasan (PK) adalah respon kemarahan maladaptif dalam bentuk perilaku menciderai diri, orang lain dan lingkungan. Penelitian ini bertujuan mendapatkan gambaran Pengaruh Rational Emotive Behaviour Therapy terhadap penurunan perilaku kekerasan di ruang rawat inap RSMM Bogor. Desain ?Quasi Experimental Pre-Post Test with ?Control Group? dengan intervensi Rational Emotive Behaviour Therapy (REBT). Sampel penelitian adalah 53 klien skizoprenia paranoid dengan PK, terdiri atas 25 kelompok intervensi dan 28 orang kelompok kontrol. Hasil penelitian menunjukkan peningkatan respon kognitif dan sosial serta penurunan respon emosi, perilaku dan fisiologis secara bermakna (P-value 0,05) pada klien yang mendapatkan REBT. REBT direkomendasikan untuk diterapkan pada klien PK bersama dengan tindakan keperawatan generalis.
