### Abstrak

The increasing industry has been followed by the environment crisis which caused by the limited of nature recycle capacity. Considering the problem, our government has changed the way from decreasing environment pollution system to proactive pollutant preventing system. It means every industry has to use the program of filter/clean product to reach the higher efficiency in productive processing. This research takes investigation and data's collection of saving energy program in using of water and electricity, along with waste production for zero emission program in the range of 6 months, April until September 2001 at PT. Indonesia Epson Industri, Cikarang. The advantages of pollution prevention may perhaps increase the efficiency of the raw material usages and product processing. Through the research's analysis, writer find that the implementation of pollutant preventing program along with increasing the proactive working condition in PT Eposon are right alternative to present a zero emission. So, they will increase the efficiency of saving energy and product processing.
