Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20239670&lokasi=lokal>

Abstrak

This project is studies a range of innovative structural composite materials that are currently available. The study includes a review of their structural design applications, design tools and an understanding of the construction process for these materials which are providing a range of structural applications. This project establishes a trend for these materials that are currently used commercially and predicts the future composite materials that are likely to be used for structural applications.
