### Abstrak

Tesis ini membahas mengenai fenomena lemahnya rezim non-proliferasi nuklir internasional dalam menghadapi perilaku nuklir Iran. Negara tersebut dapat tetap membangun program nuklirnya meskipun telah menandatangani Traktat Non- Proliferasi Nuklir (NPT). Teori signifikansi rezim Stephen D. Krasner menyatakan adanya faktor-faktor yang mempengaruhi perkembangan rezim internasional. Faktor-faktor tersebut yaitu egoistic self-interest, political power, dan norms and principles digunakan untuk membantu menjelaskan fenomena ini. Dari penelitian yang dilakukan dapat disimpulkan bahwa lemahnya rezim nonproliferasi nuklir internasional dalam kasus Iran dipengaruhi oleh (1) egoistic selfinterest Iran, (2) political power Iran, dan (3) norms and principles NPT dan IAEA yang tidak sejalan dengan Iran.

.....This thesis focuses on the phenomenon of an international nuclear nonproliferation regime's weaknesses vis a vis Iran's nuclear ambitions. Iran still continues its nuclear program although it has already signed the Nuclear Non- Proliferation Treaty (NPT). Stephen D. Krasner's regime significance theory stated that there are factors which have influenced and continue to mold the development of the international regime's policies. Those factors such as egotistic self-interest, political power, and norms and principles are used to explain this phenomenon. It can be concluded that the weaknesses of the international nuclear non-proliferation regime related to Iran's nuclear development are being influenced by (1) Iran's egotistic self-interests, (2) Iran's regional and international political power, and (3) NPT and IAEA's norms and principles that are not in line with Iran's behavior.
