Abstrak

Positive correlation between concentration and profitability is not always a result of collusion. Market concentration can be a proxy efficiency and product differentiation that have done by company. The company that can be mentioned efficient and have done product differentiation can improve market share, and industry that consist of the company has tendency to be concentrated.

This research tries to prove whether market share and concentration in Islamic and conventional banking industry as proxy to efficiency. If it is proven, so there is no relationship between market share and concentration with profitability. It is appropriate with efficient structure hypothesis.

Using separated pooled data for Islamic and conventional banking industry at period January 2002 until November 2005. This research use adjusted Smirlock mode! with fired eject method. By this research, it is expected that Islamic banking industry support efficient structure hypothesis, and conventional banking industry support diferentiation hypothesis.
