**ABSTRAK
**

Profesionalisme perawat di masyarakat dapat mempengaruhi persepsi pelajar kelas XII dan minat melanjutkan pendidikan di bidang keperawatan. Tujuan penelitian adalah mencari hubungan persepsi pelajar kelas XII tentang profesi perawat dengan minat melanjutkan pendidikan keperawatan. Metode penelitian ini survey analitik asosiasi dengan pendekatan cross sectional. Sebanyak 138 siswa kelas XII berpartisipasi dalam penelitian ini. Hasil analisa univariat menunjukan responden terbanyak berusia 17 tahun (62%), jenis kelamin terbanyak perempuan (70%), namun responden laki-laki (55%) memiliki persepsi lebih positif dibandingkan perempuan (48%). Uji statistik yang digunakan Chisquare. Hasil analisa bivariat menunjukan tidak ada hubungan antara persepsi pelajar kelas XII di SMAN 1 Cibinong terhadap profesi perawat dengan minat melanjutkan pendidikan di keperawatan ($p=0.489$, $p>0.05$). Peneliti merekomendasikan dilakukannya penelitian lanjutan mengenai faktor yang mempengaruhi persepsi pelajar tentang profesi perawat.
