Abstrak

RSIJ Pondok Kopi menerapkan dokumentasi keperawatan berbasis komputer. Penelitian ini bertujuan untuk mengetahui hubungan karakteristik dengan persepsi perawat tentang keefektivan pendokumentasian keperawatan berbasis komputer di rumah sakit Pondok Kopi. Desain penelitian ini menggunakan pendekatan cross sectional dengan metode total sampling. Sampel terdiri dari 79 perawat di ruang rawat inap. Hasil menunjukkan bahwa usia, jenis kelamin, tingkat pendidikan, dan pelatihan tidak memiliki hubungan dengan persepsi terhadap keefektivan, namun terdapat hubungan yang bermakna antara masa kerja dan persepsi perawat terhadap keefektivan pendokumentasian keperawatan berbasis komputer.RSIJ Pondok Kopi have applied computer-based nursing documentation. The aim of research determine relationship between the characteristics and nurse's perception about effectiveness of computer-based nursing documentation at Pondok Kopi Islamic Hospital. This research used cross sectional design with total sampling method. The samples consisted of 79 nurses in care unit. The result of research showed that age, gender, level of education, and training were not significantly associated with nurses perception of the effectiveness, but there was significant relationship between years of work dan perceptions of the effectiveness of computer-based nursing documentation.
