Abstrak

Penelitian ini dilakukan untuk mengetahui hubungan antara parenting self-efficacy dan parental coping pada ibu yang memiliki anak penderita kanker usia kanak-kanak madya. Pengukuran parenting self-efficacy menggunakan adaptasi alat ukur Self-Efficacy for Parenting Tasks Index (Coleman & Karraker, 2000) dan pengukuran parental coping menggunakan alat ukur Coping Health Inventories for Parents (McCubbin, 1983). Partisipan pada penelitian ini adalah 31 orang ibu yang memiliki anak penderita kanker usia kanak-kanak madya. Hasil penelitian menunjukkan bahwa terdapat hubungan positif yang signifikan antara parenting self-efficacy dan parental coping pada ibu yang memiliki anak penderita kanker usia kanak-kanak madya ($r = 0.482$, $p = 0.000$, signifikan pada L.o.S 0.01). Artinya, semakin tinggi parenting self-efficacy yang dimiliki oleh ibu maka usaha parental coping yang dilakukan juga akan semakin tinggi. Selain itu, hasil tambahan penelitian menemukan bahwa terdapat perbedaan yang signifikan pada parenting self-efficacy dan parental coping ibu yang memiliki anak penderita kanker yang menjalani rawat inap dan rawat jalan.

.....This research was conducted to find the correlation between parenting self-efficacy and parental coping among mothers of middle childhood with cancer. Parenting self-efficacy was measured using an adaptation instrument named Self-Efficacy for Parenting Tasks Index (Coleman & Karraker, 2000) and parental coping was measured using an adaptation instrument named Coping Health Inventories for Parents (McCubbin, 1983). The participants of this research are 31 mothers who have middle childhood with cancer. The main results of this research show that parenting self-efficacy has a significant positively correlation with parental coping ($r = 0.482$, $p = 0.000$, significant at L.o.S 0.01). That is, the higher mothers parenting self-efficacy, the higher parental coping effort. Furthermore, the additional results of this research have also found that there is a significant difference in parenting self-efficacy and parental coping among mothers of children with cancer who is hospitalized and as an outpatient.
