Abstrak

Penelitian ini dilakukan untuk melihat hubungan antara dyadic coping dan resiliensi keluarga pada suami/istri dari pasien kanker. Lima puluh suami/istri dari pasien kanker menjadi partisipan dalam penelitian kali ini dengan mengisi kuesioner dyadic coping dan resiliensi keluarga. Dyadic coping diukur dengan menggunakan Dyadic Coping Inventories dari Bodenmann (2007). Resiliensi keluarga diukur melalui Family Resilience Assessment Scale yang dibuat oleh Sixbey (2005) dan dikembangkan oleh Lum (2008). Hasil penelitian ini menunjukkan adanya hubungan antara dyadic coping dan resiliensi keluarga pada suami/istri dari pasien kanker. Selain itu, partisipan dalam penelitian ini memiliki skor dyadic coping dan resiliensi keluarga yang cukup tinggi.

.....This research was conducted to investigate the correlation between dyadic coping and family resilience in cancer patient's spouse. 50 cancer patient's spouse were completed all questionnaires of dyadic coping and family resilience. Dyadic coping was measured by Dyadic Coping Inventory (DCI) which was constructed by Bodenmann (2007). Family resilience was measured by Family Resilience Assessment Scale which was constructed by Sixbey (2005) and developed by Lum (2008). The results show that there was a relationship between dyadic coping and family resilience in cancer patient's spouse. Besides, participant in this research had a mildly-high score of dyadic coping and family resilience.
