Abstrak

Penelitian ini bertujuan untuk menganalisa pengaruh struktur kepemilikan terhadap tingkat risiko dan profitabilitas bank-bank di Indonesia. Terdapat dua model, model pertama menggunakan variabel independen struktur kepemilikan yang dikategorikan menjadi bank, institusi, manajer, keluarga dan perusahaan, serta variabel kontrol leverage, size, diversifikasi dan efisiensi. Sedangkan model kedua juga menggunakan variabel pada model pertama ditambahkan dengan variabel dummy listed. Penelitian ini menggunakan metode regresi cross section.

Hasil dari penelitian ini menunjukan bahwa terdapat pengaruh antara struktur kepemilikan terhadap tingkat risiko dan profitabilitas baik pada Privately Held Bank maupun Publicly Held Bank, namun apabila diteliti hanya pada Publicly Held Bank,tidak ada pengaruh antara struktur kepemilikan terhadap tingkat risiko dan profitabilitasnya.

.....
This study aims to analyze the impact of ownership structures towards banking risk and profitability level. There are two models, the first one uses ownership structures which categorized to bank, institutions, manager, family and company, and also leverage, size, diversification and efficiency. The second uses the same variable as the first one added with listed as dummy variable. This study employs cross section regression.

The results of this study indicate that there is an impact from ownership structures towards banking risk and profitability level. whether it is publicly held or privately held bank, but if just looking at the publicly held using the second model, there's no significant impact from ownership structure towards its risk and profitability level.
