Abstrak

Skripsi ini membahas tentang ketepatan sasaran dalam Program Keluarga Harapan (PKH) adalah salah satu bantuan sosial yang diberikan kepada Rumah Tangga Sangat Miskin untuk meningkatkan kualitas sumber daya manusia bagi ibu dan anak. Penulis menganalisa fenomena exclusivity, yaitu rumah tangga yang layak namun tidak menerima PKH dan inclusivity, yaitu rumah tangga yang tidak layak namun menerima PKH, serta membedah bagaimana karakteristik rumah tangga yang ter-exclude dan ter-include dari PKH tersebut. Standar kelayakan rumah tangga berdasarkan karakteristik rumah tangga sangat miskin dari Badan Pusat Statistik. Penelitian ini adalah penelitian kuantitatif dengan menggunakan data Program Pendataan Perlindungan Sosial Tahun 2011. Hasil penelitian ini adalah Program Keluarga Harapan tidak sepenuhnya tepat sasaran.

.....This thesis is about the appropriateness of targeting the Hopeful Family Program, better known as Program Keluarga Harapan (PKH). This is a Government program aimed at providing social assistance to very poor households in order to improve the human resource quality of mothers and children. Eligibility is based on the definition of very poor households used by the Indonesian National Statistics Board (Badan Pusat Statistik). This study examines the phenomena of exclusivity and inclusivity when poverty is measured according to a wealth index developed by Filmer and Pritchett (2001). Whereas exclusivity refers to households which are eligible for but are not beneficiaries of the program while inclusivity refers to those households which should not be eligible but nevertheless receive program benefits. In addition, the study further assesses relevant demographic and social characteristics of households excluded and included in the program. This is a quantitative study that relies on data compiled for the Social Protection Program in 2011 and it shows that program targeting has not been fully effective.
