Abstrak

Penelitian ini mengkaji masalah pengaruh sistem informasi terhadap kinerja pegawai di Inspektorat Jenderal Kementerian Energi dan Sumber Daya Mineral. Melalui variabel karakteristik tugas, variabel karakteristik teknologi, variabel keahlian penggunaan komputer, variabel kesesuaian tugas teknologi, dan variabel penggunaan, yang bertujuan untuk mengetahui pengaruhnya pada variabel kinerja, dengan menggunakan pendekatan penelitian kuantitatif, sampel sebesar 132 (seratus tiga puluh dua), teknik penarikan sampel terapis (Stratified Random Sampling), metode analisis bivariate analysis, dan hipotesis korelasi Rho Spearman, penelitian ini menghasilkan bahwa ada korelasi positif yang signifikan antara keahlian penggunaan komputer dengan kinerja, dan juga karakteristik teknologi dengan kesesuaian tugas teknologi di Inspektorat Jenderal Kementerian Energi Sumber Daya Mineral.

.....This study examines the influence information systems of employee's performance in the Inspectorate General, Ministry of Energy and Mineral Resources. Through variable task characteristics, technology characteristics, computer self efficacy, task technology fit, and utilization, which aims to determine the effect on performance variables, using quantitative research approach, sample of 132 (one hundred and thirty-two), a stratified random sampling technique, metode bivariate analysis, and korelasi Rho Spearman, this study has also found that there was a positive significant correlation between task technology fit with performance skills, and characteristics technologies with task technology fit in the Inspectorate General of the Ministry of Energy and Mineral Resources.
