Abstrak

**ABSTRAK
**

Kejadian tidak diharapkan terjadi di rumah sakit 65 % adalah komunikasi. Upaya meningkatkan keselamatan pasien perlu dilakukan petugas kesehatan terutama melalui komunikasi. Komunikasi Situation, Background, Assesment, dan Recommendation (SBAR) merupakan komunikasi yang telah terbukti efektif dalam meningkatkan keselamatan pasien. Penelitian ini bertujuan mengidentifikasi pengaruh pelatihan komunikasi SBAR terhadap pengetahuan dan kepatuhan perawat pelaksana dalam melakukan komunikasi SBAR.

Desain penelitian pretest-posttest without control group dilakukan pada 50 perawat ruang intensif yang dilatih dan diobservasi. Hasilnya menunjukkan peningkatan pengetahuan terhadap komunikasi SBAR setelah dilakukan pelatihan komunikasi SBAR (pvalue 0.000). Komitmen komunikasi dengan SBAR harus disepakati oleh semua petugas kesehatan yang ada melalui kebijakan dan prosedur.
