Abstrak

Karya ilmiah ini bertujuan untuk mengetahui hasil pengimplementasian evidence based: pencegahan standar & massage + VCO pada pasien dengan resiko terjadi ulkus dekubitus. Klien teridentifikasi dengan lumbar canal stenosis dan memiliki resiko ulkus dekubitus ringan. Pemberian asuhan keperawatan dilakukan selama 5 hari, 2x sehari dalam 5 menit. Indikator terjadinya ulkus dekubitus melihat dari ciri terjadinya ulkus dekubitus grade 1, yaitu: Kemerahan, Perubahan sensasi, Perubahan suhu, dan Perubahan konsistensi. Hasil implementasi menunjukkan bahwa selama 5 hari pemberian implementasi tidak teridentifikasi satupun tandatanda terjadinya ulkus dekubitus. Saran selanjutnya implementasi dapat diberikan pada klien dengan resiko ulkus dekubitus tinggi.

.....

This study aims to knowing the implementation of evidence based nursing: standard preventing procedure & massage + VCO to patient with a risk for pressure ulcer. The patient who include to this study has lumbar canal stenosis and mild risk for pressure ulcer. The process of Nursing care within 5 days, twice a day in 5 minutes. The indicator for pressure ulcer is refer to characteristic of pressure ulcer stage 1, that is Redness, Alteration of Sensation, Alteration of Thermal, & Alteration of Consistency. The result show that there is no sign of the pressure ulcer indicator in 5 days. Next implementation we recommendation to doing an implementation in severe risk of pressure ulcer.
