Abstrak

Isolasi sosial merupakan masalah keperawatan di ruang Arimbi RS. Marzoeki Mahdi Bogor dengan jumlah terbanyak (62,5 %) dari 48 klien yang dirawat. Berdasarkan penelitian yang dilakukan Renidayati, keliat dan Sabri (2008) ditemukan tentang keefektifan terapi yang dapat digunakan untuk mengatasi masalah isolasi sosial klien yaitu terapi Social Skill training untuk meningkatkan ketrampilan sosialisasi Klien. Penelitian yang dilakukan Wiyati, Hamid dan Gayatri (2009) tentang efektifitas terapi Family Psychoeducation didapatkan hasil pada keluarga ada peningkatan kemampuan afektif dan psikomotor sehingga meningkatkan dukungan keluarga.

Penulisan karya ilmiah ini bertujuan untuk memberikan gambaran penerapan terapi Social Skill Training dan Family Psychoeducation pada klien isolasi sosial dengan menggunakan pendekatan model Stress Adaptasi Stuart dan Model Sistem Neuman. Metode yang digunakan adalah study serial kasus. Tindakan diberikan pada 30 pasien isolasi sosial, 16 pasien mendapatkan terapi Social Skill training saja, 14 klien yang lain mendapatkan terapi Social Skill training dan family psychoeducation.

Hasil terapi menunjukan penurunan gejala isolasi sosial dan peningkatan kemampuan ketrampilan sosial lebih banyak pada pasien yang mendapatkan terapi social skill training dan terapi Family Psychoeducation dibandingkan dengan pasien isolasi sosial yang hanya mendapatkan terapi social Skill training.

Rekomendasi dari karya ilmiah ini adalah terapi social skill training dan terapi Family Psychoeducation dapat menjadi standar terapi spesialis pada klien isolasi sosial.
