**Abstrak**

Penelitian ini bertujuan untuk mengetahui perbedaan tingkat motivasi mahasiswa Fakultas Ilmu Keperawatan Universitas Indonesia dalam melakukan pencarian informasi pembelajaran melalui fasilitas hotspot di area FIK UI dan melalui membaca buku di perpustakaan FIK UI. Rancangan penelitian menggunakan deskriptif komparatif.

Metode pemilihan sampel menggunakan proporsional stratified sampling dan melibatkan 101 mahasiswa. Instrumen menggunakan kuisioner yang dikembangkan sendiri oleh peneliti berdasarkan penelusuran literatur. Data analisis menggunakan uji statistik univariat dan chi square.

Hasil penelitian secara statistik menunjukkan terdapat perbedaan yang bermakna antara motivasi mahasiswa dalam melakukan pencarian informasi pembelajaran melalui fasilitas hotspot kampus dan melalui membaca buku di perpustakaan FIK UI ( $p=0,016$ ). Pengembangan sarana dan prasarana akses informasi baik fasilitas hotspot maupun perpustakaan diperlukan guna menunjang keperluan akademis.

.....

The purpose of this study is to know the differences of students's motivation level in Faculty of Nursing, University of Indonesia in seeking for learning information by hotspot facilities in FON area and by reading books in FON library. This study used descriptive comparative design.

Proporsional stratified sampling was chosen as a strategy for sample selection and involve 101 students. In this study, data were collected using questionnaire which is developed by researchers and based upon a review literature. Univariat statistic and chi square was used to analyze the data.

Statistics result of this study indicated that there was a significant differences FON UI students's motivation level in seeking for learning information by hotspot facilities in FON area and by reading books on FON library ( $p=0,016$ ). This research recommends to improve the information access of structure and infrastructure whether hotspot facilities or library for supporting academic need.
