Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20367375&lokasi=lokal>

Abstrak

Penelitian ini membahas relasi negara (pemerintah kota DKI Jakarta) dan swasta (Suez Environment yang diwakili Mercy Corps) dalam menjalankan layanan sanitasi/ fasilitas limbah cair bagi warga RW 6, Kelurahan Kalideres, Jakarta. Pemerintah DKI Jakarta belum bisa memberikan pelayanan sanitasi pada warga Jakarta. Alasannya karena cakupan layanan sewerage hanya mencakup 3% daerah DKI Jakarta (di luar pulau seribu). Warga di 97% daerah sisanya harus memenuhi sendiri fasilitas sanitasinya dengan tangki septik. Pemerintah masih belum memberikan prioritas pada layanan limbah cair. Lebih lanjut lagi mereka kekurangan sumber daya untuk memberikan layanan yang layak pada seluruh warga Jakarta. Akibatnya swasta masuk pada layanan limbah cair, meski swasta juga ternyata membawa kepentinganya sendiri. Penulis menggunakan teori Urban Regime dan konsep Public Private Partnership untuk membahas hasil penelitian.

.....

This research explains about relation between state (Jakarta municipal) and private (Suez Environment represented by Mercy Corps) in managing sanitation/ wastewater facility for resident in RW 6, Kelurahan Kalideres, Jakarta. Jakarta municipal can not give basic service of sanitation to Jakarta resident since sewerage coverage only covers 3% of Jakarta area. Resident in 97% of the rest area has to establish their own sanitation/ wastewater facility with septic tank. The government has not taken priority to wastewater service. Moreover the government also lacks of resources to give wastewater service to all of Jakarta resident. Consequently, private could participate in managing wastewater system, although private has its own interest. The writer uses Urban Regime theory and concepts of Public Private Partnership to examine this phenomenon.
