

Sign language and linguistic universals / Wendy Sandler, Diane Lillo-Martin

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20393648&lokasi=lokal>

Abstrak

Sign languages are of great interest to linguists, because, although they are the product of the same brain, their physical transmission differs greatly from that of spoken languages. In this pioneering and original study, Wendy Sandler and Diane Lillo-Martin compare sign languages with spoken languages, in order to seek the universal properties they share. Drawing on general linguistic theory, they describe and analyze sign language structure, showing linguistic universals in the phonology, morphology, and syntax of sign language, while also revealing non-universal aspects of its structure that must be attributed to its physical transmission system. No prior background in sign language linguistics is assumed, and numerous pictures are provided to make descriptions of signs and facial expressions accessible to readers. Engaging and informative.
