

Novel therapeutic targets for antiarrhythmic drugs / edited by George E. Billman

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20394367&lokasi=lokal>

Abstrak

This book provides a comprehensive overview of several promising novel drug targets and approaches against arrhythmias, with particular emphasis placed on malignant ventricular arrhythmias. The individual chapters address a single treatment strategy written by a leading expert on the chapter, including arrhythmia mechanisms, kinase inhibitors, calcium and potassium channel targets, and atrial selective drugs.
