Abstrak

Integrated urban space is that if the elements inside functionally comprehensible links, structurally in clear spatial order, and think about the importance of historical, cultural and social values. In this study, the urban area of Surakarta is look into part of that objective: how is the condition of norm and function factors of integration. The process of analysis utilized description and exploration method to procure norm and function condition. The output is integration of Surakarta area faces problems -- especially about those two factor and should be merged into a whole.
