

Information ergonomics: a theoretical approach and practical experience in transportation

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20398415&lokasi=lokal>

Abstrak

This book consists of two closely intertwined parts. The first, theoretical part defines the concept of an information system, followed by an explanation of action regulation as well as cognitive theories to describe man information system interaction. A comprehensive description of information ergonomics concludes the theoretical approach. In the second, practically oriented part of this book authors from industry as well as from academic institutes illustrate the variety of current information systems taken from different fields of transportation, i.e. aviation, automotive, and railroad.
