

Stereoscopic HDTV: research at NHK science and technology research laboratories

Yamanoue, Hirokazu, author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20398873&lokasi=lokal>

Abstrak

This book focuses on the two psychological factors of naturalness and ease of viewing of three-dimensional high-definition television (3D HDTV) images.

The purpose of the book is to examine the correlations between the psychological factors and amount of characteristics of parallax distribution in order to understand the characteristics of easy- and difficult-to-view images and then to seek to create a new 3D HDTV system that minimizes visual fatigue.
