Abstrak

The book emphasizes the use of science, evaluation, and knowledge building to inspire improvements counterterrorism interventions. Focusing on three key areas, identifying and accessing relevant data, using innovative methodologies for generating new interventions, and examining various perspectives to evaluation counterterrorism. The book combines a framework for using scientific findings to inform security policy with a best-practices approach to implementing programs. Strategies such as risk terrain modeling and validity testing for security screening instruments are shown as fostering improvements in threat assessment and in anticipating and responding to future events. The editors also argue for a broader research infrastructure to encourage ongoing development. Among the topics covered, assessment and comparison of terrorism data sources, information sharing and fusion centers, various longitudinal models for assessing counterterrorism policies and terrorism trends, evidence-based evaluations and validity testing of airport security measures, public opinion and criminological research application to counterinsurgency and counterterrorism, police practices for understanding and managing terror risk, counterterrorism finance and trade regulations, legal challenges and evaluation of counterterrorism policy.
