Abstrak

[ABSTRAK

Cuaca merupakan keadaan yang berkaitan dengan udara dan dapat diprediksi atau diramalkan. Salah satu sarana

untuk melihat hasil prediksi tersebut adalah melalui program ramalan cuaca pada stasiun televisi. Peranan seorang pembawa berita ramalan cuaca sangatlah penting dalam program tersebut. Dalam penelitian yang bersifat

kualitatif deskriptif ini ajektiva yang digunakan oleh pembawa berita ramalan cuaca akan dianalisis menggunakan teori ragam bahasa wanita dan pria. Tujuan penelitian ini adalah untuk memperoleh suatu gambaran

mengenai pemakaian ajektiva dalam laras bahasa pembawa berita ramalan cuaca di Belanda. Hasil analisis menunjukkan bahwa para pembawa berita ramalan cuaca wanita lebih sering menggunakan ajektiva daripada pria

meskipun selisihnya tidak terlalu signifikan. Para pembawa berita ramalan cuaca wanita menggunakan ajektiva atributif lebih banyak daripada ajektiva predikatif. Terdapat juga pemakaian ajektiva jenis komparatif, yaitu 4 kata. Sementara itu, para pembawa berita ramalan cuaca pria lebih sering menggunakan ajektiva atributif. Pada

ragam bahasa pria tersebut terdapat satu kata yang termasuk dalam ajektiva komparatif. Pembawa berita ramalan cuaca wanita juga menggunakan kosakata yang berkaitan dengan nuansa warna.

ABSTRACT

The weather is a condition associated with air and can be predicted. The predictions are to be seen through the TV weather forecast. The weather forecasters play a very important role. This qualitative descriptive research analyses the adjectives used by Dutch male and female weather forecasters using the theory of male and female language. The adjective is one of the distinguishing aspects of the male and female languages.

The purpose of this research is to get a clear description of the usage of adjectives in the register of the weather forecasters. The results of this study show that the female weather forecasters tend to use more adjectives especially the attributive adjective. A very small number of comparative adjectives are also found in both languages. Meanwhile, the male weather

forecasters use more of the attributive adjectives. The female weather forecasters also use adjectives, which are related to colors., The weather is a condition associated with air and can be predicted.
