

The Availability and Eligibility of Drug Warehouse at Health Centre Based on Geography and Topography in Indonesia=Rifaskes Data 2011

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20406239&lokasi=lokal>

Abstrak

Background: Drug warehouse at health centres is one of pharmacy service that should be paid attention to store medication and ensure the quality. The study aimed to analyze the available and eligibility of drug warehouse at health centres in Indonesia based on geographic location and topography of the health centres. Methods: It is a further analysis on secondary data from Health Facility Research year 2011 which conducted in 33 provinces of Indonesia . Result: There were more than 90% of health centres available drug warrehouse in Indonesia based on the geography and topography conditions, expect in very remote area just 89.7%. The hihest component of warehouse facilities on reporting and drugs storage facilities were ;logistic and distribution in 2010, meanwhile the lowest was supporting facilities as narcotocs/ psychotropic cabinet. The availability of that facilities is lower in remote, borderline and island area. The eligibility of warehouse at health centers in Indonesia showed the majority were classified as eligible but in the remote, bordeline and islands areas are lower. The statistical analysis (mann Whitney and Spearman correlation) were significant associations between eligibility warehouse by geographic and topographic of island and remote areas. Conclusion: The availability and eligibility of warehouse at health center in Indonesia the majority were classified as eligible but in the remote, bordeline and islands areas are lower. Recommendation: Central and local goverments should assure increase facilities and infrastructure of drug warehouse by increasing health budget to ensure appropriate and standartdized drug storages.
