

Theoretical foundations of artificial general intelligence

Pei Wang, editor

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20406538&lokasi=lokal>

Abstrak

This book is the very first collection in the field of Artificial General Intelligence (AGI) focusing on theoretical, conceptual, and philosophical issues in the creation of thinking machines. All the authors are researchers actively developing AGI projects, thus distinguishing the book from much of the theoretical cognitive science and AI literature, which is generally quite divorced from practical AGI system building issues. And the discussions are presented in a way that makes the problems and proposed solutions understandable.
