Abstrak

The presence of computer and its communication network have created possibilities for library in not only processing the automation of activities and saving internal data but also providing access to information which are physically absent in a library. This condition have changed library concept and form into a new one known as digital library. Digital library network in Indonesia have been developing since 2000s with the appearance of several library network such as IDLN, Ganesha Digital Library, SPEKTRA Virtual Library and GARUDA. Along with its development, there have been many non-technical and technical problems. Therefore, in developing digital library network in Indonesia, it needs hard work, sharing and national educating spirit to make it remain working as an information source for society.
