

Search computing: broadening web search

Stefano Ceri, editor

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20406986&lokasi=lokal>

Abstrak

Search computing, which has evolved from service computing, focuses on building the answers to complex search queries by interacting with a constellation of cooperating search services, using the ranking and joining of results as the dominant factors for service composition. The field is multi-disciplinary in nature and takes advantage of contributions from other research areas such as knowledge representation, human-computer interfaces, psychology, sociology, economics, and legal sciences. The book has been divided into four parts focussing on extraction and integration, query and visualization paradigms, exploring linked data, and games, social search and economics.
