

Building institutional capacity for policy development through bilateral science and technology cooperation using joint-teams: mining environmental policy in Indonesia

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20407080&lokasi=lokal>

Abstrak

Provision of technical assistance to developing countries through bilateral partnership with similar but more mature organization in other parts of the world has proved to be an effective way to transfer expertise, train staff, build up management capabilities, and enhance institutional capabilities. This paper examines an innovative arrangement in which Indonesia Ministry of Mines and Energy is participating in science and technology cooperation with the US Department of the Interior to develop institutional capacity for reformulation and implementation of mining environmental policy. Prospects and progress in implementation of the project which began in April 1995 is reported.
