

Detailed coal exploration in Napal, Peranap, Riau, Sumatera, Indonesia

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20407178&lokasi=lokal>

Abstrak

A potential coal deposit has been identified during detailed coal exploration campaign carried out by the Directorate General of Mines coordinating with the NEDO in Napal, Central Sumatera. Eight coal seams were found in the Upper Miocene formation, with horizontal dips. Considering the fact, a big open pit coal mining operation is possible to be planned in Napal.
