

Mining industry in Indonesia

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20407194&lokasi=lokal>

Abstrak

Nowadays the exertion of mineral in Indonesia should be based on the GBHN of 1993 which is set for the next 25, the year 2019. According to the Pelita VI, there are several points that should be considered in mining industry. The mining industry should include all aspect related to regional economics, regional manpower, considering land use allocation, infrastructure development, reclamation, etc. In line with the rapid growth of Asia-Pacific economy, Indonesian mining should be able to compete. To anticipate future economic challenge, Indonesia should prepare important aspects including building infrastructure, establishing relationship with neighboring countries, as well as improving administration services among others.
