----

Abstrak

In this book, present an extensive overview of the work done in Semantic Search and other related areas.
They explore different technologies and solutions in depth, making their collection a valuable and
stimulating reading for both academic and industrial researchers.
The book is divided into three parts. The first introduces the readers to the basic notions of the Web of Data.
The second part is dedicated to Web Search. It presents different types of search, like the exploratory or the
path-oriented, alongside methods for their efficient and effective implementation. The focus of the third part
is on linked data, and more specifically, on applying ideas originating in recommender systems on linked
data management, and on techniques for the efficiently querying answering on linked data.
