

Identifying physical variables from Sir-A images: a study in the Takubanperahu area

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20408285&lokasi=lokal>

Abstrak

Images acquired by the SIR-A in 1981 demonstrate the capability of this microwave remote sensing system to perceive and map a wide range of different surface features. A selection of West Java scene displays this capability with respect to earth resources such as geology, geomorphology, land cover, and land use. The study area is grouped into nine units on the basis of their drainage patterns and image texture characteristics.
