

Parliament's toilet for biogas as replication of factory worker's community sanitation center

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20408471&lokasi=lokal>

Abstrak

Eco-san (ecological sanitation) is an elite name for 'MCK++' project which is in operation in Petojo Utara-West Jakarta. It is the only project sponsored by USAID, which has been visited by US' Foreign Minister, H.E. Hillary Clinton on February 19, 2009. It seems the same concept could be applied at the Parliament House, but the biogas produced by 560 Parliament's members plus 1680 staffs and employees should not be utilized for cooking but for electricity generation up to 1.2 MW. It may save much of electricity bill from PLN. Saving money will be highly appreciated than spending the people's tax for renovation of the parliament members' toilets up to IDR 2 billions. It is really crazy spending. Now, the Parliament's toilet project might be continued, if it will be equipped with the biogas digester and gas engine generator or dual fuels (diesel/gas) its name should be changed to Ecological Sanitation or Eco-San.
