Abstrak

The advancement in computer-information technology nowdays has come to a revolutionary development which affect the current information sources. One of the latest forms of information source is the digital publishing/e-publishing which can be accessed from computer network. A number of changes have happened which leads is to a demand that librarians as information providers have to be able to create a system which is user friendly. This can be done by creating information architecture, database integration and human computer interaction systems or good user interface so that users are able to retrieve d=the desired information easily. The current changes of digital publishing have demanded users to be able to adapt with the existing system. In addition users also have to know about the online information retrieval system and have a good searching strategy. Towards these challenges, both librarians and users are expected to make innovations in order to create a system which is compatible with digital publishing/e-publishing and usable for them as well.
