

Modeling time in computing

Furia, Carlo A., author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20410092&lokasi=lokal>

Abstrak

Models that include a notion of time are ubiquitous in disciplines such as the natural sciences, engineering, philosophy, and linguistics, but in computing the abstractions provided by the traditional models are problematic and the discipline has spawned many novel models. This book is a systematic thorough presentation of the results of several decades of research on developing, analyzing, and applying time models to computing and engineering.
