## Abstrak

[Skripsi ini mencoba menjelaskan hubungan antara konsep persepsi resiko dengan tingkat penggunaan ganja di kalangan mahasiswa universitas x. Penelitian ini mengambil sampel di salah satu universitas di Jakarta Selatan, dengan menggunakan metode pengambilan sampel Stratified Random Sampling yang merupakan teknik pengambilan sampel probabilita, sampel dari penelitian ini adalah mereka yang memiliki pengalaman menggunakan ganja maupun yang tidak. Dengan menggunakan teori pilihan rasional dari Paternoster dan teori pembelajaran sosial dari Bandura. Penulis menemukan hubungan dan mendapatkan hasil bahwa persepsi resiko memiliki pengaruh terhadap tingkat penggunaan ganja di kalangan mahasiswa universitas x.

.....This thesis consist an explanatory research to discover the connection between perception of risk towards the use of marijuana among the students of x university.

The research took sample from one of the university in South Jakarta, with stratified random sampling method that is one of the probability method, samples of this research are both the user and non user of marijuana from the same university. Theory of this research is Paternoster?s rational choice and Bandura?s social learning. When the research is completed, the writer was able to find that it is true perception of risk is affecting the use of marijuana.;This thesis consist an explanatory research to discover the connection between

perception of risk towards the use of marijuana among the students of x university.

The research took sample from one of the university in South Jakarta, with stratified random sampling method that is one of the probability method, samples of this research are both the user and non user of marijuana from the same university.
