Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20412376&lokasi=lokal>

Abstrak

Penelitian ini dilakukan untuk melihat hubungan antara religiusitas dengan motivasi sukarelawan, dan juga untuk melihat dimensi-dimensi religiusitas yang memiliki hubungan dengan motivasi sukarelawan.

Pengukuran religiusitas menggunakan alat ukur religiusitas (Iqbal, 2011) yang diadaptasi dari alat ukur religiusitas milik Fetzer (2003) dan pengukuran motivasi sukarelawan menggunakan alat ukur volunteer motivation inventory (Esmond & Dunlop, 2004). Partisipan penelitian ini adalah sukarelawan yang mayoritas mengikuti kegiatan sukarela di bidang pendidikan dan keagamaan. Total partisipan dalam penelitian ini berjumlah 182 orang dan berdomisili di Jabodetabek.

Hasil penelitian ini menunjukkan terdapat hubungan positif yang signifikan antara religiusitas dan motivasi sukarelawan (understanding, reciprocity, dan social interaction). Sebaliknya, tidak terdapat hubungan yang signifikan antara religiusitas dan motivasi sukarelawan (values). Selain itu, dimensi religious coping diketahui sebagai satu-satunya dimensi dalam religiusitas yang memiliki hubungan signifikan dengan motivasi sukarelawan (reciprocity).

.....

The Study was conducted to find the relationship between religiosity and volunteer motivation, and also to see which dimensions of religiosity that has a relationship with a volunteer motivation. Measurement of religiosity using religiosity measuring instrument (Iqbal, 2011), adapted from the measuring religiosity instrument's of Fetzer (2003), and the measurement of volunteer motivation using volunteer motivation inventory (Esmond & Dunlop, 2004). Participants of this study were volunteers who followed the majority of the volunteer activities in the field of education and religious affairs. Total Participants of this study are 182 volunteers who live in Jabodetabek.

The results of this study showed a significant positive relationship exists between religiosity and volunteer motivation (understanding, reciprocity, and social interaction). In contrast, there is no significant relationship between religiosity and volunteer motivation (values). In addition, coping religious dimension known as the only dimension in religiosity that has a significant positive relationship with the volunteer motivation (reciprocity).
