Abstrak

[ABSTRAK

Pasien paska infark miokard sering mengalami gangguan pemenuhan kebutuhan seksual. Sampai sekarang penelitian terkait seksualitas paska infark miokard masih terbatas. Penelitian ini bertujuan memperoleh gambaran persepsi pemenuhan kebutuhan seksual pasien infark miokard. Penelitian ini menggunakan pendekatan kualitatif desain fenomenologi deskriptif, metode pengumpulan data wawancara dan catatan lapangan. Partisipan adalah pasien poli jantung RSUD Pasar Rebo Jakarta Timur yang terdiagnosa infark miokard. Data dianalisa dengan teknik Colaizzi. Penelitian ini mengidentifikasi 5 tema : perubahan fungsi seksual, ketakutan melakukan aktivitas seksual, alternative pemenuhan kebutuhan seksual, makna seksual bagi individu, kebutuhan pada pelayanan kesehatan. Hasil penelitian menunjukkan pasien dengan infark miokard mengalami gangguan dalam pemenuhan kebutuhan seksual dan membutuhkan bantuan tenaga kesehatan sesuai tema yang ditemukan.
