[ABSTRAK

Keluarga yang merawat anak dengan gagal ginjal kronik terutama yang mendapat terapi hemodialisis memiliki masalah. Penelitian ini bertujuan untuk mengeksplorasi pengalaman keluarga dalam merawat anak gagal ginjal kronik yang mendapat terapi hemodialisis. Metode penelitian ini menggunakan pendekatan fenomenologi deskriptif dengan cara wawancara mendalam kepada 7 partisipan. Partisipan adalah keluarga yang merawat anak selama minimal 1 bulan terakhir dan sedang menjalani terapi hemodialisis di RSUPN Cipto Mangunkusumo Jakarta. Data dianalisis dengan menggunakan teknik Collaizi dan menghasilkan 5 tema, yaitu 1) respon keluarga terhadap perawatan anak, 2) strategi coping yang dibangun keluarga, 3) dampak merawat anak bagi keluarga,, 4) upaya dukungan sosial yang diberikan keluarga, 5) perubahan pada anak yang menjalani terapi hemodialisis menurut persepsi keluarga. Hasil penelitian ini menunjukkan bahwa keluarga yang merawat anak memiliki permasalahan yang kompleks. Hasil penelitian ini diharapkan menjadi informasi dasar untuk mengembangkan program dalam menerapkan asuhan yang berpusat pada keluarga.
