## Abstrak

### [<b>ABSTRAK</b><br>

Perawat maternitas merupakan tenaga kesehatan yang berwenang dan mampu memberikan perawatan kesehatan reproduksi perempuan khususnya antenatal care. Namun masyarakat belum mengenal peran dan fungsi perawat spesialis maternitas dalam pelayanan antenatal care. Penelitian ini bertujuan untuk menggali pengalaman ibu hamil dalam melakukan kunjungan antenatal pada praktik mandiri perawat maternitas. Penelitian ini menggunakan desain kualitatif fenomenologi. Enam orang partisipan berpartisipasi dalam penelitian ini. Analisis data dilakukan dengan tematik konten analisis. Teridentifikasi tujuh tema yang menggambarkan pengalaman ibu hamil dalam melakukan kunjungan ANC di praktik mandiri perawat. Tema tersebut antara lain, pengalaman mencari pelayanan ANC bersama suami melalui media sosial dan survey langsung, alasan ibu hamil mencari tempat ANC baru karena pelayanan tempat sebelumnya tidak sesuai keinginan, ibu hamil merasakan komunikasi petugas yang baik dalam melayani, ibu hamil merasakan pelayanan yang berpusat pada keluarga, baik waktu pelayanan, jenis pelayanan, biaya pelayanan dan fasilitas sesuai keinginan ibu hamil. Ibu hamil berharap klinik dilengkapi USG dan bekerjasama dengan asuransi kesehatan, perawat di klinik maternitas berperan sebagai care provider, manager, educator dan counselor. Hasil penelitian ini menganjurkan bahwa perawat harus meningkatkan kemampuannya dalam memberikan pelayanan pada kesehatan reproduksi perempuan sesuai dengan kebutuhan klien.
