ABSTRACT

This paper focuses on finding prevention format for online gambling among university students which can be applied in Indonesia. The approach used in analyzing the prevention measures is crime prevention through social approach based on 4 (four) elements of Hirschi's social control theory, i.e. attachment, commitment, involvement, and belief. Furthermore, the prevention format for students will be paired with several online gambling cases in Indonesia. The result of this paper is expected to influence prevention measures for online gambling among university students in Indonesia. , This paper focuses on finding prevention format for online gambling among university students which can be applied in Indonesia.
