Abstrak

[ABSTRAK

Masyarakat perkotaan menghadapi berbagai masalah kesehatan, baik fisik maupun psikososial. Salah satu masalah psikososial yang sering muncul adalah harga diri rendah situasional. HDR situasional dapat disebabkan oleh masalah kesehatan fisik, misalnya osteoarthritis. Osteoarthritis menyebabkan keterbatasan gerak pada penderitanya, sehingga dapat mempengaruhi performa peran dalam kehidupan sehari-hari. Perubahan performa peran tersebut dapat menimbulkan rasa tidak berharga, yang disebut harga diri rendah. Tujuan dari penulisan KIAN ini adalah memaparkan asuhan keperawatan harga diri rendah situasional pada klien yang mengalami osteoarthritis. Tindakan yang dilakukan adalah memotivasi klien berpikir positif dan latihan kemampuan positif. Hasil evaluasi menunjukkan bahwa berpikir positif dan latihan kemampuan positif dapat meningkatkan motivasi klien untuk kembali berkarya.

ABSTRACT

Urban communities are facing various health problems, both physical and psychosocial. One of the psychosocial issues that often arise is situational low self-esteem. HDR situational can be caused by physical health problems, such as osteoarthritis. Osteoarthritis causes the sufferer limited motion, so it can affect the role performance in daily life. Changes in the performance of these roles can cause a feeling of worthlessness, which called low self-esteem. The purpose of this paper was to describe the nursing care of situational low self-esteem in clients who have osteoarthritis. The action taken was to motivate client to think positively and do the positive ability. The results showed that positive thinking and exercise capabilities can positively improve client motivation to return to work., Urban communities are facing various health problems, both physical and psychosocial.
