### Abstrak

[<b>ABSTRAK</b><br> Kanker kolorektal merupakan kanker yang muncul di sekitar kolon dan rektum. Salah satu dampak kanker kolorektal adalah kekurangan nutrisi atau malnutrisi. Padahal asupan nutrisi yang adekuat sangat diperlukan untuk meningkatkan sistem imun melawan sel kanker dan mempersiapkan jaringan dalam proses penyembuhan pasca pembedahan. Kebersihan mulut dan perawatan bibir dengan madu menjadi salah satu implementasi keperawatan yang dapat dilakukan untuk memperbaiki status nutrisi pasien kanker kolorektal. Hasil implementasi selama kurang lebih dua minggu menunjukkan dampak yang positif terhadap status nutrisi pasien yang ditunjukkan dengan peningkatan nafsu makan dan perbaikan manifestasi klinis yang berhubungan dengan status nutrisi. Kebersihan mulut dan perawatan bibir dengan madu dapat direkomendasikan untuk implementasi keperawatan pada pasien kanker kolorektal terutama yang mengalami malnutrisi.;<b>ABSTRACT</b><b> Cancer colorectal is cancer that located at around colon and rectum, one of effect cancer colorectal is malnourished. Adequat nutrition is very important to enhance immunity systems to against cancer cells and heal the wound after surgery. Oral hygiene and lip care with honey liquid can be done to repaire the nutritional status. The results of these implementations showed the positive impact which indicated by enhancement of appetite and improvement of clinical manifestations related to nutritional status for two weeks. So, oral hygiene and lip care with honey are recommended to repaire the nutritional status for patient cancer colorectal.;Cancer colorectal is cancer that located at around colon and rectum, one of effect cancer colorectal is malnourished.
