Abstrak

ABSTRAK
Keperawatan kesehatan masyarakat perkotaan merupakan bagian keperawatan komunitas yang memfokuskan pelayanan pada penyelesaian masalah kesehatan.

Masyarakat perkotaan memiliki karakteristik yaitu padat penduduk, tingginya angka pertumbuhan kendaraan bermotor, dan mobilitas yang tinggi. Karakteristik ini mempengaruhi pola aktivitas masyarakat, salah satunya penggunaan alat transportasi untuk efektivitas waktu. Faktor mobilitas yang tinggi, tingginya angka pertumbuhan kendaraan, dan ketidakdisiplinan pengemudi kendaraan menimbulkan risiko

kecelakaan yang berdampak pada masalah kesehatan salah satunya fraktur. Selama praktik di ruang bedah RSUP Cipto Mangunkusumo penulis mengambil kasus klien fraktur radius ulna dengan ansietas tinggi selama hospitalisasi. Penulis menganalisis salah satu tindakan keperawatan untuk mengurangi ansietas klien.

ABSTRACT
Urban health nursing is part of the community nursing service that focuses on

addressing health problems in urban areas. Urban community is characterized by dense population, a high rates in the growth of motor vehicles, and high mobility of the society. These characteristics affect the pattern of community activities, one of which is in the use of motor vehicle for transportation. High mobility factor, a high rates of growth in motor vehicle and inappropriate behavior may increase the risk of accidents that may impact on health, one of which is a fracture. During the practice in the surgery department of Cipto Mangunkusumo Hospital, the author cared for the patient with fracture of the radius ulna with high anxiety during hospitalization. The authors analyze done of the nursing intervention provided to reduce client anxiety;
