Diabetes mellitus is metabolic disease because alter secretion act of insulin or both showed by hyperglycemia Hyperglycemia uncontrolled can cause complication either acute or chronic One of chronic complication is diabetic ulcer Increasing prevalence of diabetes could be assumed that could increase prevalence of diabetic ulcer either In Indonesia diabetic ulcer and gangrene were the most diabetes complication that was hospitalized Care of diabetic ulcer that was not optimal could cause length of stay LOS in hospital Diabetic ulcer could cause needs of self care demand disturbance for patient Nurse had important role in help self care demand for patient For that reason application of nursing care with self care Orem model focused on individual ability to do self care recognize and regulate care requirement Evidence Based Nursing about Progressive Muscle Relaxation PMR therapy and breathing exercise for enhance blood glucose control and reduce stress level in diabetes type 2 patient whereas nursing innovation purposed to enhance self care through increasing patient ability for Self Health Assessment Keywords Diabetes mellitus diabetic ulcer Orem rsquo s Self Care Model;ABSTRACT Name WidiaWatiNPM 1206195810Study Program Postgraduate of Nursing Science programTitle Nursing care by Orem rsquo s self care model application for diabetes mellitus patient with diabetic ulcer in RSUPN Cipto Mangunkusumo Diabetes mellitus is metabolic disease because alter secretion act of insulin or both showed by hyperglycemia Hyperglycemia uncontrolled can cause complication either acute or chronic One of chronic complication is diabetic ulcer Increasing prevalence of diabetes could be assumed that could increase prevalence of diabetic ulcer either In Indonesia diabetic ulcer and gangrene were the most diabetes complication that was hospitalized Care of diabetic ulcer that was not optimal could cause length of stay LOS in hospital Diabetic ulcer could cause needs of self care demand disturbance for patient Nurse had important role in help self care demand for patient For that reason application of nursing care with self care Orem model focused on individual ability to do self care recognize and regulate care requirement Evidence Based Nursing about Progressive Muscle Relaxation PMR therapy and breathing exercise for enhance blood glucose control and reduce stress level in diabetes type 2 patient whereas nursing innovation purposed to enhance self care through increasing patient ability for Self Health Assessment Keywords Diabetes mellitus diabetic ulcer Orem rsquo s Self Care Model;ABSTRACT Name WidiaWatiNPM 1206195810Study Program
